

MASERATI

e-Bike

LINE UP 2020

The Maserati E-bike project born from the collaboration between Maserati and Asia Kingston, with the technical support of Cicli Elios Italy.

The partnership combines the Maserati's DNA such as performance, design and quality with the state of the art technology in the e-bike sector.

Each Maserati e-bike is developed as a unique and distinctive product with a own identity and style.

All products feature a fully integrated battery inside the frame, with a positive impact on design and performance, thanks to a balanced weight distribution resulting in a comfortable and performing ride.

The Maserati e-bikes are equipped with top brand motors and electronics, such as Shimano and Fazua, and are assembled in Italy with high quality components of premium brands such as RockShox, Magura, Suntour, Vision.

High end components

SHIMANO STEPS E8000

Powerful.

SHIMANO STEPS motor is strong enough to handle the steepest of trails, yet intuitive enough to give you just the right amount of support every pedal stroke along the way.

Lightweight yet rigid crankset for direct power transfer. Both crankset and rest of the drivetrain built on SHIMANO's proven technology. This gives you reliability and confidence from first to last pedal stroke.

The Firebolt Switch Unit control with intuitive operation is ergonomically designed for a MTB. It's the ultimate in comfort and reliability as you switch between modes while blasting through the trails.

Extensive choice of power-assist settings to match your unique riding style. Compact, easy-to-read display with dynamic visuals when switching between support settings.

Ultra-durable, powerful battery specially designed for the rigors of mountain biking.

FAZUA

Innovative.

An innovative drive system. The Drivepack, which weighs just 3.3 kg and houses the motor, electronics and Battery Pack, can be installed and removed on the bike's downtube with a quick click release, giving riders the ability to easily convert their bicycles into pedelecs and back again in no time at all. The patented drive system makes it possible to create bicycles that feature a look and weight profile unlike any other on the market, all while giving users dynamic rideability and superior riding pleasure.
